

We're new to the government software space, but we're old pros at solving enterprise-level business problems.

ERP FOR LOCAL GOVERNMENT

What is GovSense?

GovSense empowers jurisdictions to design flexible, easy-to-use solutions that meet their needs in land use planning and project review, regulatory management, inspections, code enforcement, citizen requests, asset management, work order management and more.

What inspired GovSense?

After spending years consulting and designing software solutions for local governments, GovSense CTO Gary McTall believed there was a better way to serve local governments through collaboration via the cloud.

Many software vendors will tell you that their solution is "now cloud based" or "lives in the cloud" or is "privately hosted in

the cloud for your security." For them, the cloud is a software version, but to us, it's our guiding principle.

We set out to do something radically different to improve the overall customer experience. Rather than simply building a permitting, licensing, inspection system, we built the first true cloud ERP designed specifically for state and local government.

GovSense Delivers:

- Continuous Support
- Consistent Versioning
- Uninterrupted Growth
- Scalable Solution
- Strategic Partnership

GovSense

With GovSense, we enable users to design their experience.

We listened to the needs of local government from inspectors, permit administrators, planners, finance managers, and department heads so we could ensure that GovSense is the choice cloud solution for local government.

GovSense leverages powerful customization tools, workflow automation and even a robust scripting engine easy for power-users to adopt.

We'll beat anything our competitors are offering.

1 Technology

We stay ahead of the curve by anticipating technological advances and ensuring that our software provides the cutting edge. Instead of building architecture for current technology, which needs to be revamped on a regular basis, we use GovFramework: an architecture that is already anticipating changes and capable to accommodate those internally and externally.

2 Commitment to you

We're privately held and only answer to our customers, not investors. Clients' success and satisfaction drive our success, not Wall Street. We make decisions with our customers' best interests in mind instead of choosing what is most beneficial to us.

3 Fair pricing structure

Instead of moving you to the back burner once we earn your business, we use a SaaS yearly base model. This model makes us earn your business every year instead of using a balloon payment.
